

Financial Technologies Elevating Humanity

Everest's decentralized transaction protocol, cloud wallet, and biometric identity verification gives everyone access to the global economy

Empowerment through Everest

Over 1.1 billion people in the world currently do not have a verifiable identity, 2.6 billion people live without a bank account, and 5 billion do not have a smartphone. These factors prevent economic growth and access to 21st century digital economy, services, and jobs. This leaves more than 40% of the world population unable to realise their full economic potential, and prevents them from growing beyond 20% of the global GDP.

Everest solves this lack of digital infrastructure with biometrically verified identities, cloud wallets and a device-free, universal value-exchange platform that allows individuals and institutions (banks, governments, financial services, hospitals, e-Commerce) to exchange value, transfer funds and verify identity.

Full platform: Transaction chain + Wallet + Identity

The Everest platform is a complete solution allowing the seamless exchange of value between all facets of an economy (user-to-user, organization-to-organization and organization-to-user).

- **EverChain**, a massively scalable, cost-effective layer 2 transaction chain that enables value-transfer between parties.
- **EverWallet**, a digital wallet that enables the storage of multiple currencies, identity data and documents.
- **EverID**, a decentralized identity platform utilizing biometric + government + 3rd party identity to provide users with an user-controlled, device-free digital identity

Everest reduces fraud and leakage, possibly saving organizations \$trillions, and makes identity verification at scale more cost-effective than ever before. At the same time, users receive social and economic benefits from their digital identity and cloud wallet.

The ID token

IDs are a utility token that allow access to the Everest platform and the applications and services built on EverChain, EverWallet and EverID.

The 800 million issued tokens will be purchased by banks, governments, NGOs, large organizations, and users (i.e. remittance senders) that want to access Everest's network. Institutions are given varying levels of access to the platform based on how many tokens they hold while users will not be required to hold tokens in order to receive value.

Team

Leaders of multiple successful blockchain projects and IPOs

Bob Reid
Co-Founder and CEO

GM Bittorrent, Partner Kai Labs, CEO & Co-founder VelocityBits

Brad Witteman
Co-Founder and CPO

Senior positions with BitTorrent & Emergent DivX, Openwave

Gautam Ramnath
Partnerships

International consultant to Gates Foundation, Millennium Foundation, US State Department

Mike Kail
CTO

CIO & SVP of Infrastructure @ Yahoo! VP of IT Ops @ Netflix

Advisors

Toomas Hendrik
Former President of Estonia

Aya Miyaguchi
MD Ethereum Foundation

Atsushi Taira
Mistletoe, Softbank, Brightstar, DoCoMo

Dr. Virgil Griffith
Ethereum Foundation
Co-Author of Casper

Amb. Khokhar
InterAmerican
Dev Bank

Dr. Al Watkins
Global Summit, World Bank, UnN Technology

Greg Horowitz
Stanford, UCSD,
Berkshire Hathaway

Chris Wilson
Water and Health
Foundation

Jordan Greenhall
DAOstack, CEO DivX

Wilson Choi, CFA
FundV, Beam Capital
